SUMMARY

Builds and ships systems that turn raw data into decisions -- from a retrieval-augmented AI platform serving page-accurate answers across documents to a demand-forecasting engine that directly shapes real-time resource allocation. Track record centers on closing the gap between prototype and production: 33/33 automated tests passing in CI, an 83.3% predictive accuracy benchmark achieved through systematic model comparison, and normalized data architectures built to eliminate redundancy at scale. IBM-certified Data Science practitioner (BCA, CGPA 8.08) seeking an entry-level Data Analyst, Data Science, or AI/ML Engineering role.

EDUCATION

Bachelor of Computer Applications (BCA)

Jun 2023 - May 2026

St. Aloysius (Deemed to be University), Mangaluru, Karnataka

CGPA: 8.08 / 10.0

Relevant Coursework: Data Structures, DBMS, Machine Learning Fundamentals, Statistical Analysis, Web Technologies

TECHNICAL SKILLS

Programming Languages: Python, SQL, R, Java, JavaScript, PHP, C
ML / Data Science: Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Predictive Modelling, Feature Engineering
AI / RAG: FAISS Vector Search, FastEmbed, LLM Integration (Groq), Retrieval-Augmented Generation
Web Technologies: HTML5, CSS3, JavaScript, React.js, TypeScript, TailwindCSS, PHP, REST APIs, FastAPI, Django REST
Databases: MySQL, SQLite, PostgreSQL (3NF schema design, complex joins, indexing)
Tools & Platforms: Jupyter Notebook, Git, GitHub, GitHub Actions (CI/CD), Docker deployments, Render, Vercel, VS Code
Concepts: Machine Learning, Data Analysis, JWT Auth & RBAC Systems, Geospatial Visualisation, Automated Testing (pytest)

PROJECTS

DocMind AI -- Production RAG Document Intelligence Platform

FastAPI | React.js/TypeScript | FAISS | Groq LLM | JWT Auth -- github.com/vivekjpoojary/docmind-ai

Architected & deployed full-stack RAG platform enabling PDF/DOCX/TXT upload & AI Q&A with page-accurate citations.
Implemented per-user isolated FAISS vector search with FastEmbed embeddings and Groq LLM integration.
Built JWT-based auth with refresh-token rotation; validated with 33/33 automated tests passing via GitHub Actions CI.

PlayPoint -- Sports Venue Booking & Analytics Platform

React.js | Django REST Framework | SQLite | Python | Scikit-learn -- github.com/Vivekjpoojary

Built full-stack booking platform for court reservations supporting three permission tiers via JWT RBAC.
Designed 3NF-compliant relational schema across nine normalized tables enforcing referential integrity.
Trained Linear Regression model on booking history to predict peak-demand slots feeding slot-allocation dashboards.

IBM Data Science Capstone -- Falcon 9 Landing Prediction

Python | Pandas | NumPy | Scikit-learn | Matplotlib | Folium

Built end-to-end pipeline -- SpaceX REST API ingestion, web scraping, EDA, and feature engineering.
Benchmarked four classifiers; a GridSearchCV-tuned Decision Tree achieved 83.3% accuracy, the best of the set.
Built interactive Folium maps to visualise launch-site proximity and surface spatial patterns across historical missions.

CERTIFICATIONS

IBM Data Science Professional Certificate

Aug 2025

IBM / Coursera

10-course specialisation covering Python, SQL, data visualisation, and ML, capped by applied capstone project.

Deloitte Technology Virtual Experience Program

Mar 2026

Forage

Completed modules in Python-based ETL, IIoT data unification, and software architecture proposal.

ACHIEVEMENTS & ACTIVITIES

National-Level Wushu & Kung Fu Athlete -- Bronze medal, 16th National Kung-Fu Championship.
Class Representative (2024-25) -- Elected student liaison between faculty and peers for a BCA cohort.
